

# RadiantOne Platform

## The Data Foundation for Your Identity-First Program

Identity data plays a vital role in business operations and security decisions, yet most enterprises today struggle with identity sprawl. Human and non-human identities are scattered across legacy systems, cloud platforms, non-standard applications, and decentralized IAM tools. And it only gets more complex when M&A and divestitures occur. This fragmented identity data sprawled across the enterprise creates critical blind spots, hampering operational efficiency and heightening the risk of security breaches.

As the data foundation for your identity-first business and security program, the RadiantOne platform transforms fragmented identity ecosystems into a secure, single source of truth that reduces risk and drives better business outcomes.

### Benefits

- Gain a single source of truth**  
 Unify legacy, cloud, and machine identities into one clean, context-rich record.
- Lower IGA cost and effort**  
 Replace dozens of feeds; slash connector licenses and manual fixes.
- Modernize your identity infrastructure**  
 Seamlessly retire end-of-life directories and sync data across all environments.
- Ensure real-time security**  
 AI analytics flag risks instantly, enforcing least-privilege access.
- Automate governance and compliance**  
 Data-driven reviews and effective reporting support compliance with NIS2, DORA, SOX, and similar regulations.
- Ensure identity hygiene at scale**  
 Leverage bi-directional, real-time synchronization across legacy and cloud systems—without disruption.

## Proactively Minimize Risk, Speed Operations, and Streamline Compliance

RadiantOne unifies your IAM ecosystem with cleansed identity data and combines identity data management, real-time observability, and advanced analytics to provide you with complete visibility and control of all identities in your environment.

### Identity Data Management

Aggregates, correlates, unifies, and synchronizes identity data across numerous disparate sources, providing a foundational single source of truth that powers your IAM program.

### Identity Analytics

Automates review processes and provides in-depth access chain analytics to ensure access rights are compliant with internal security policies and regulatory requirements.

### Identity Observability

Provides 360° real-time visibility of your identity data from all applications and security solutions, automatically identifying anomalies and risks, and expediting remediation activities.

## Powered by AIDA our Artificial Intelligence Data Assistant

Harnessing generative AI to speed ISPM processes and workflows, RadiantOne facilitates governance, compliance, and cyber risk mitigation. The RadiantOne AI Data Assistant (AIDA) guides you through data-related IAM, IGA, and Observability processes to help you:

Learn, visualize, and understand identity access data and the correlation of its attributes across the organization.

Uncover who has access to what—from users to accounts, groups, and permissions—and if this access is legitimate.

Prevent attacks by highlighting anomalies and risk with proposed corrective actions.

## One Platform, Your Choice of Delivery

The RadiantOne platform can be deployed to meet your organizational and environment requirements.

### SaaS Deployment

RadiantOne delivered as a fully-managed SaaS offering, is built on a scalable and reliable infrastructure framework that provides the security you need via isolation at the data, network, and service layers, as well as deployment flexibility to meet your security performance requirements.

### Self-Managed Deployment

Deploy and manage RadiantOne to best meet your unique needs—on-prem, bring-your-own cloud, or hybrid. The platform is available as a self-contained cloud-native AKS, EKS, GKE or OpenShift stack, deployable in a customer-owned and managed environment.

Radiant Logic empowers complex enterprises to transform fragmented identity data from a major risk into a valuable business asset, ensuring the resilience of your IAM ecosystem.

Trusted by one-third of the Fortune 100 and 60% of US Federal Cabinet Agencies, Radiant Logic helps eliminate identity sprawl, accelerate business operations, minimize your attack surface, and automate compliance.
